IRFAN ALI JAT

DevOps & Cloud Engineer

Summary

DevOps and cloud engineer focused on AWS, Kubernetes, and infrastructure as code. Builds and deploys systems using Terraform, Docker, and GitOps-based CI/CD pipelines. Seeking an entry-level DevOps, Cloud, or Platform Engineering role.

Cloud and Infrastructure as Code

- AWS Services – EC2, VPC, S3, IAM, RDS, Lambda, ECS, ELB, Auto Scaling, CloudFront, CloudWatch, Route 53, EventBridge, DynamoDB, Cost Explorer, Bedrock
- Infrastructure as Code – Terraform, Ansible
- Containers and Orchestration – Docker, Kubernetes, Helm

Automation and DevOps

- CI/CD and GitOps – GitHub Actions, Argo CD, GHCR, Trivy
- Languages and Scripting – Python, Bash, Go, TypeScript
- Monitoring and Alerting – Prometheus, CloudWatch, Slack alerting

System Engineering and Infrastructure

- Operating Systems – Linux (Ubuntu, Fedora), Nginx, MySQL
- Virtualization – VMware, VirtualBox

PROJECTS

- **Kubernetes Operator for PostgreSQL Cluster Management** **db-operator**
  - Built a Kubernetes operator in Go using controller-runtime and custom resource definitions (CRDs) to manage PostgreSQL clusters declaratively.
  - Automated S3 backups and exposed Prometheus metrics for cluster monitoring.
  - Packaged the operator with Helm and integrated Argo CD deployment with GitHub Actions for testing, image builds, and Trivy vulnerability scanning.
- **Peer-to-Peer File Sharing Platform over WebRTC** **fizzshare**
  - Developed a peer-to-peer file sharing platform using TypeScript, WebRTC, WebSocket signaling, and a TURN relay.
  - Implemented SHA-256 integrity checks and QR-based sharing links.
  - Containerized the application with Docker and deployed it on AWS EC2 using GitHub Actions automation.

- **Serverless AWS Cost Optimization and Governance Platform** costguard
  - Built a serverless cost governance platform using AWS Lambda, EventBridge, Cost Explorer, and DynamoDB, provisioned with Terraform.
  - Implemented spending anomaly detection and orphaned resource discovery with Slack alerts.
  - Automated testing and deployment through a GitHub Actions CI/CD pipeline.
- **End-to-End GitOps CI/CD Pipeline** gitops-cicd-pipeline
  - Built a pipeline that runs tests, builds Docker images, and pushes versioned images to GitHub Container Registry (GHCR) on Git pushes.
  - Configured Argo CD to synchronize Kubernetes deployments from Git-managed configuration, reducing manual kubectl apply operations.
  - Implemented Git-driven deployment workflows with automated synchronization and auditable configuration changes.

EDUCATION

University of Sindh (SULC) Jamshoro, Pakistan

Bachelor of Science in Computer Science January 2024 – December 2027 (Expected)
