PROFESSIONAL SUMMARY

DevOps and Cloud Infrastructure Engineer with 8 months of hands-on experience building Amazon Web Services (AWS) environments, continuous integration and continuous delivery (CI/CD) pipelines, Kubernetes platforms, and DevSecOps automation. Delivered 12 portfolio projects documented across 20 public GitHub repositories using Terraform, GitHub Actions, Argo CD, Amazon Elastic Kubernetes Service (EKS), Prometheus, and Grafana. Reduced deployment cycle time by 80% (from 10 to 2 minutes), provisioned 24 AWS resources with zero manual console steps, and deployed observability across 14 Prometheus targets in under 35 minutes. B.S. in Computer Science, expected May 2027.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS): VPC, EC2, ECS, EKS, ECR, ALB, Auto Scaling, RDS, S3, IAM, DynamoDB, Lambda, CloudWatch

Containers and Orchestration: Docker, Docker Compose, Kubernetes, Helm, eksctl

Infrastructure as Code (IaC): Terraform (modules, remote state, workspaces), Ansible

CI/CD and GitOps: GitHub Actions, Argo CD, Jenkins

Monitoring and Observability: Prometheus, Grafana, Loki, Alertmanager, PromQL

DevSecOps and Policy: Trivy, Bandit, Open Policy Agent (OPA), Conftest, Kyverno, Hadolint

Programming and Tools: Python, Bash, Go, Linux, Git, Nginx, YAML, HashiCorp Configuration Language (HCL)

WORK EXPERIENCE

DevOps Engineer, Cloud Infrastructure Portfolio

Sep 2025 – Present

Independent Technical Projects

Remote, Pakistan

- Delivered 12 end-to-end projects spanning Terraform infrastructure as code (IaC), GitOps CI/CD, EKS deployments, observability, and DevSecOps, documented across 20 public GitHub repositories with architecture diagrams and runbooks.
- Designed a dual-repository GitOps pipeline using GitHub Actions and Argo CD that reduced deployment time by 80% (from 10 to 2 minutes) and enabled zero-downtime releases through readiness probes and SHA-tagged container images.
- Provisioned a 24-resource, multi-tier AWS architecture (VPC, dual-AZ subnets, ALB, Auto Scaling Group, RDS) using 5 reusable Terraform modules with S3 remote state, DynamoDB locking, and AES-256 encryption.
- Implemented DevSecOps guardrails with Trivy, Bandit, OPA, and Kyverno that enforced 8 security policies and blocked all Critical and High CVEs before deployment to Kubernetes.

PROJECTS

DevSecOps CI/CD Pipeline with Security Gates

<https://github.com/irfanjat/devsecops-app>

GitHub Actions, Trivy, Bandit, OPA, Argo CD, Kubernetes

- Built an end-to-end pipeline with static application security testing (SAST), container scanning, and 6 Kubernetes policy checks that blocked 100% of vulnerable builds before Argo CD sync, with full SARIF audit reporting.

End-to-End GitOps CI/CD Pipeline

<https://github.com/irfanjat/gitops-cicd-pipeline>

GitHub Actions, Argo CD, Kubernetes, Docker, Helm

- Automated a dual-repository GitOps workflow with self-healing and prune policies, achieving commit-to-pod traceability and zero-downtime rollouts validated by health check probes on every deployment.

Multi-Tier AWS Infrastructure with Terraform

<https://github.com/irfanjat/terraform-aws-infra>

Terraform, VPC, EC2, ALB, RDS, S3, DynamoDB

- Provisioned 24 AWS resources through 5 modular Terraform components, enabling repeatable environment setup in under 8 minutes and reducing environment-specific code by 70% through module reuse.

CERTIFICATIONS

Oracle Cloud Infrastructure Foundations Associate, Oracle (2026) • IBM Introduction to DevOps Engineering Professional Certificate, Coursera (2025)

AWS Cloud Technical Essentials, Amazon Web Services, Coursera (2025) • AWS Cloud Practitioner Essentials, Amazon Web Services, Coursera (2025)

EDUCATION

Bachelor of Science in Computer Science, University of Sindh (SULC), Jamshoro, Pakistan

Expected May 2027

Relevant Coursework: Operating Systems, Computer Networks, Data Structures, Database Systems
