PROFESSIONAL SUMMARY

DevOps Engineer with **8+ months** of hands-on experience designing production-style cloud infrastructure, **GitOps CI/CD** pipelines, and **Kubernetes** observability stacks. Built **8+ end-to-end projects** across Terraform on AWS, GitHub Actions, ArgoCD, Jenkins, EKS, and Prometheus/Grafana—with **20+ public GitHub repositories**. Holds **IBM** and **AWS** certifications; pursuing BS Computer Science. Seeking remote DevOps, Cloud, or Platform Engineer roles.

TECHNICAL SKILLS

CI/CD & GitOps	GitHub Actions, ArgoCD, Jenkins
Containers & Orchestration	Docker, Docker Compose, Kubernetes, Helm, eksctl
Infrastructure as Code	Terraform (modules, remote state), AWS Provider
Cloud — AWS	VPC, EC2, ALB, Auto Scaling, EKS, RDS, S3, IAM, DynamoDB, CloudWatch
Observability	Prometheus, Grafana, Loki, Alertmanager
Languages & Tools	Python, Bash, Linux, Git, GitHub, GHCR, kubectl

PROJECTS

End-to-End GitOps CI/CD Pipeline

GitHub Actions · ArgoCD · Kubernetes · Docker · Helm · Python · github.com/irfanjat/gitops-cicd-pipeline

- Reduced deployment time **80%** (10 min → 2 min) via two-repo GitOps: GitHub Actions (test → build → push → config-update); ArgoCD rolling sync to Kubernetes.
- Achieved **zero-downtime** releases and **100% traceability** with Git SHA image tags and /health readiness probes before traffic shift.
- Eliminated drift using ArgoCD **selfHeal** and **prune**, auto-reverting out-of-band kubectl changes.

Production Multi-Tier AWS Infrastructure — Terraform IaC

Terraform · VPC · EC2 · ALB · Auto Scaling · RDS · S3 · DynamoDB · github.com/irfanjat/terraform-aws-infra

- Provisioned **24 AWS resources** (VPC, 2-AZ subnets, ALB, EC2 ASG, RDS PostgreSQL) with modular Terraform—zero manual console setup.
- Configured **S3 remote state**, DynamoDB locking, AES-256 encryption—safe concurrent applies and state recovery.
- Enforced **least-privilege** SGs: ALB (80) → EC2 (ALB only) → RDS (5432 from EC2, encrypted, private).
- Decomposed into **5 reusable Terraform modules** (vpc, security_groups, alb, ec2, rds).

Kubernetes Observability Stack

Prometheus · Grafana · Loki · Alertmanager · Helm · github.com/irfanjat/k8s-observability

- Deployed observability across **14 Prometheus targets** in <35 min via kube-prometheus-stack and loki-stack (Helm).

- Reduced **MTTD** with 3 PrometheusRule CRDs—version-controlled, operator auto-reload.
- Built **6-panel Grafana dashboard** with live Loki logs, CPU/memory series, and node metrics.

Additional Projects

Project	Stack	GitHub
Node.js CI/CD + Docker Hub	GitHub Actions, Docker	node-cicd-docker
Flask — Jenkins CI/CD on EC2	Flask, Jenkins, AWS	project-two-tier-flask-app
Kubernetes on AWS EKS	EKS, ALB Ingress, Helm	aws-eks-kubernetes-project
S3 Static Website — Terraform	Terraform, S3	terraform-aws-s3-static-website
Docker Compose Stack	Node.js, MongoDB	Docker-compose-app

CERTIFICATIONS

- **IBM DevOps and Software Engineering Professional Certificate** — IBM / Coursera
- **AWS Cloud Practitioner Essentials** — AWS / Coursera
- **AWS Cloud Technical Essentials** — AWS / Coursera

EDUCATION

Bachelor of Science in Computer Science — University of Sindh (SULC), Jamshoro, Pakistan · Expected 2027
