

IRFAN ALI

Karachi, Sindh, Pakistan | +92 315 3711489 | irfanali.cloud@gmail.com

linkedin.com/in/irfanjat | github.com/irfanjat | irfanali.pages.dev

TECHNICAL SKILLS

Cloud (AWS): VPC, EC2, ALB, Auto Scaling, S3, IAM, RDS, Lambda, DynamoDB

IaC & CI/CD: Terraform, GitHub Actions, ArgoCD

Containers & Orchestration: Docker, Kubernetes, Helm

Policy & Security: Open Policy Agent, Kyverno

Languages: Python, Go, Bash, YAML, HCL

PROJECTS

CostGuard — AWS Cost Optimization Platform github.com/irfanjat/costguard

Python, AWS Lambda, Terraform, DynamoDB, Slack API, GitHub Actions

- Built a serverless cost-monitoring platform in Python and AWS Lambda that detects spending anomalies and orphaned EC2, EBS, and EIP resources using z-score analysis of daily usage patterns.
- Automated daily cost reports and Slack alerts with DynamoDB-backed Lambda scanners, deployed end-to-end via Terraform and GitHub Actions, removing the need for manual AWS Cost Explorer reviews.

End-to-End GitOps CI/CD Pipeline github.com/irfanjat/gitops-cicd-pipeline

GitHub Actions, ArgoCD, Kubernetes, Docker, Helm, Python

- Designed a GitOps deployment pipeline with GitHub Actions and ArgoCD that replaced manual kubectl deployments with push-to-deploy releases using SHA-tagged, immutable Docker builds and Helm charts.
- Configured ArgoCD for automated sync, drift detection, and self-healing, enabling continuous reconciliation and rolling updates across the Kubernetes cluster.

DB Operator — Kubernetes Operator for PostgreSQL github.com/irfanjat/db-operator

Go, controller-runtime, Kubernetes CRDs, Helm, ArgoCD, Prometheus

- Built a custom Kubernetes operator in Go using controller-runtime that manages PostgreSQL clusters via Custom Resource Definitions, extending the Kubernetes API rather than relying on existing controllers.
- Implemented automated S3 backups, Prometheus monitoring, a Helm chart, and ArgoCD GitOps deployment for continuous reconciliation.

Policy Guardrails Engine github.com/irfanjat/Guardrails

Open Policy Agent, Conftest, Kyverno, GitHub Actions

- Built a policy-as-code guardrail engine enforcing security and compliance rules on Terraform plans (via Conftest/OPA) and Kubernetes manifests (via Kyverno) inside a CI pipeline.
- Integrated automatic pull-request comments on policy violations, blocking non-compliant changes before merge.

Production Multi-Tier AWS Infrastructure github.com/irfanjat/terraform-aws-infra

Terraform, VPC, EC2, ALB, Auto Scaling, RDS, S3, DynamoDB

- Provisioned a multi-availability-zone AWS environment of 24 resources using modular Terraform, including VPC, subnets, Application Load Balancer, EC2 Auto Scaling, and RDS with automated failover.
- Secured infrastructure state and access by establishing S3 remote state with DynamoDB locking and scoped, least-privilege IAM policies.

EDUCATION

University of Sindh (SULC) Jamshoro, Pakistan

Bachelor of Science in Computer Science Expected 2027

CERTIFICATIONS

- OCI Foundations Associate — Oracle Cloud Infrastructure
- DevOps Engineering Professional Certificate — IBM
