PROFESSIONAL SUMMARY

DevOps and Cloud Infrastructure Engineer with hands-on experience in AWS, Kubernetes, GitOps CI/CD, and infrastructure automation. Delivered measurable results: 80% faster provisioning, 40% shorter deployment lead times, and 35% reduction in MTTR. Focused on automation, security, and reliability across the full infrastructure lifecycle.

TECHNICAL SKILLS

Cloud: AWS — EC2, VPC, ALB, Auto Scaling, EKS, RDS, S3, IAM, DynamoDB, CloudWatch

Containers: Docker, Kubernetes (EKS, Kind)

IaC: Terraform, Ansible

CI/CD & GitOps: GitHub Actions, ArgoCD, Jenkins

Observability: Prometheus, Grafana, Loki, Alertmanager

Scripting: Python, Bash

HANDS-ON DEVOPS EXPERIENCE

Independent DevOps Practitioner Sep 2025 – Present

Self-Directed

- Designed and deployed modular AWS infrastructure with Terraform remote state and DynamoDB locking, cutting provisioning time by **80%**.
- Architected dual-repository GitOps pipeline using GitHub Actions and ArgoCD on EKS with automated rollbacks, reducing deployment lead times by **40%**.
- Implemented cluster-wide observability using kube-prometheus-stack, Loki, and custom PrometheusRule CRDs, reducing MTTR by **35%**.
- Enforced least-privilege IAM, private subnets, encrypted Terraform state, and RBAC across all lab environments.
- Built serverless cost anomaly detection via AWS Lambda and Cost Explorer with z-score alerting, surfacing cost spikes within **24 hours**.

PROJECTS

CostGuard — AWS Cost Optimization Platform

Python · AWS Lambda · Cost Explorer · DynamoDB · Terraform · GitHub Actions

- Built a serverless cost intelligence engine collecting daily AWS spend via the Cost Explorer API, storing metrics in DynamoDB for trend analysis.
- Applied z-score anomaly detection to flag cost spikes within **24 hours**, delivering Slack alerts with one-click remediation buttons.
- Automated orphaned-resource scanning — unattached EBS volumes, unused EIPs — enabling continuous identification and elimination of wasted cloud spend.

End-to-End GitOps CI/CD Pipeline

GitHub Actions · ArgoCD · Kubernetes (EKS) · Docker · Helm

- Designed a dual-repository GitOps workflow separating application code from Helm configuration, enabling auditable and declarative deployments.
- Configured ArgoCD self-healing and drift detection on EKS with Helm chart templating, achieving zero-downtime releases across staging and production.
- Integrated Trivy container scanning and OPA/Conftest policy gates, blocking non-compliant images before promotion.

Kubernetes Observability Platform

Prometheus · Grafana · Loki · Alertmanager · Helm · kube-prometheus-stack

- Deployed cluster-wide monitoring with kube-prometheus-stack and custom PrometheusRule CRDs, reducing MTTR by **35%**.
- Integrated Loki log aggregation with Grafana, building unified dashboards correlating logs and node metrics for faster root-cause analysis.
- Configured multi-channel Alertmanager routing with severity-based grouping and silencing, eliminating alert noise across environments.

EDUCATION

Bachelor of Science in Computer ScienceExpected May 2027
University of Sindh (SULC) — Jamshoro, Pakistan
